

Report No. 457(55/1.0/3)

Level and Pattern of Consumer Expenditure in India 1999-2000

**NSS 55th Round
(July 1999 – June 2000)**

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

May 2001

Preface

The National Sample Survey Organisation (NSSO) has been carrying out all-India household surveys on Consumer Expenditure and Employment & Unemployment with a large sample usually once in every five years. The sixth such survey was conducted in the 55th round (July 1999-June 2000) - which covered Non-agricultural Enterprises in the Informal Sector in addition. The schedule of enquiry on Consumer Expenditure for the survey was, more or less, similar to that adopted in previous quinquennial rounds.

The present report contains detailed tables giving, for each State and Union Territory of India, the distribution of households by monthly per capita expenditure classes and sizes. It also contains the break up of consumer expenditure by community groups both in quantity and value, per capita consumption of cereals and pulses, etc by average monthly per capita expenditure classes.

This report has four sections and one appendix. Section One of the report is introductory while Section Two presents Concepts and Definitions. Section Three gives Sample Design and Estimation Procedure. Survey findings are provided in Section Four while the Appendix contains the tables.

The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. The Survey Design & Research Division (SDRD) of the NSSO developed the survey design and prepared the report.

I am grateful to the Chairman and members of the Governing Council, Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.

Comments/suggestions from the readers will be most welcome.

National Sample Survey Organisation*

Contents

Section One	Introduction	1 - 3
Section Two	Concepts and Definitions	4 - 7
Section Three	Sample Design and Estimation Procedure	8 - 15
Section Four	Survey Findings	16 - 57
Appendix A	Tables	A1-A266

Appendix A List of Tables

1R:	Per 1000 distribution of households and persons by MPCE class, number per 1000 households of adults and children by sex in different MPCE classes	A1-A17
1U:	Per 1000 distribution of households and persons by MPCE class, number per 1000 households of adults and children by sex in different MPCE classes	A18-A34
2R:	Per 1000 distribution of household by size for each MPCE class	A35-A51
2U:	Per 1000 distribution of household by size for each MPCE class	A52-A68
3R:	Quantity of consumption of cereals and pulses per person for a period of 30 days for each MPCE class	A69-A101
3U:	Quantity of consumption of cereals and pulses per person for a period of 30 days for each MPCE class	A102-A134
4R:	Value of consumption of cereals and pulses per person for a period of 30 days for each MPCE class	A135-A167
4U:	Value of consumption of cereals and pulses per person for a period of 30 days for each MPCE class	A168-A200
5R:	Value (Rs) of consumption of broad groups of food and non-food items per person for a period of 30 days for each MPCE class	A201-A233
5U:	Value (Rs) of consumption of broad groups of food and non-food items per person for a period of 30 days for each MPCE class	A234-A266

Section One

Introduction

1.0 The 55th round of NSS was conducted during July 1999 to June 2000 on household consumer expenditure, employment-unemployment and informal non-agricultural enterprises (other than those engaged in industrial categories of mining & quarrying', electricity, gas and water supply). It was the sixth quinquennial survey on Consumer Expenditure and Employment-Unemployment.

As decided by the Governing Council of NSSO, consumer expenditure and employment-unemployment surveys are carried out simultaneously every five years. The previous five quinquennial surveys were carried out during 27th round (Oct 1972 – Sept 1973), 32nd round (July 1977 – June 1978), 38th round (Jan – Dec 1983), 43rd round (July 1987 – June 1988) and 50th round (July 1993 – June 1994). In other rounds of NSS consumer expenditure inquiry on a reduced scale is being carried out from the 42nd round (July 1986-June 1987) onwards. From the 45th round onwards the subject coverage of the schedule was expanded to include some important key characteristics of employment-unemployment so that an annual series of consumer expenditure and employment-unemployment data is available.

During this 55th round, a series of remedial measures have been taken to control the non-sampling errors. At the same time, household surveys have been integrated with enterprise survey. Since the reorganization of NSSO in 1972, an integrated survey of households and enterprises was conducted for the first time in this round.

The salient features of this quinquennial survey were as follows: 1) Considering the size of the consumer expenditure schedule and Employment-Unemployment schedule it was thought that it is very difficult to obtain information for both the schedules from the same household. So, they were canvassed in separate set of households unlike in earlier rounds. 2) The itemization of consumer expenditure schedule has been rationalized by merging some of the items. Information on cash purchase and consumption out of homegrown stock was also not collected like in earlier rounds as it was found from the past results that a household normally consumes either from purchase or from homegrown stock and not from both purchase and homegrown stock. During this round, therefore, only total consumption and source of consumption for each items of food, pan, tobacco & intoxicants, fuel & light and clothing & footwear were collected. 3) For seeking better cooperation from the informants a team of 2 or 3 investigators along with one supervisory staff was deployed for fieldwork rather than only one investigator. 4) The expenditure on second-hand clothing and second-hand durable goods was included in the consumption expenditure for the first time. Although information on second-hand durable goods was collected in earlier rounds, they were never included in consumption expenditure

estimates. Also, the wages paid in cash to domestic servant or cook who was classified as a member of the household by definition, were also included in the consumption expenditure estimates. As such, the scope of the consumption expenditure has been extended over the previous rounds. 5) For controlling the non-sampling errors, information on consumption for items of food, pan, tobacco & intoxicants were collected for two different reference periods. In the past this information was collected for only one reference period. 6) In contrast, information for items of clothing, footwear, education, medical (institutional) and durable goods was collected for only one reference period. This information was collected for two different reference periods in earlier quinquennial rounds of consumer expenditure. [Prior to 50th round, two reference periods were used for the items of clothing, footwear and durable goods.] 7) Considering very high workload per first-stage unit on an average in the 55th round, the total number of sample first-stage units was reduced. However, to balance this reduction, number of households surveyed per first-stage unit was increased from 10 to 12.

1.1 Geographical coverage: The geographical coverage of the survey was the whole of Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands which remain inaccessible throughout the year. A few other areas of Jammu & Kashmir were also excluded from the survey coverage owing to unfavourable field conditions.

1.2 Sub-round: The survey period of one year was, as usual, divided into four sub-rounds of three months each as indicated below and equal number of sample villages and blocks were allotted to each sub-round.

Sub-round 1	:	July-September 1999
Sub-round 2	:	October-December 1999
Sub-round 3	:	January-March 2000
Sub-round 4	:	April-June 2000

1.3 Sample Design: The sample design adopted in the survey was a two stage stratified design. The first stage units were 1991 census villages (panchayat wards for Kerala) for rural sector and Urban Frame Survey (UFS) blocks for urban sector. The second stage units were households both for consumer expenditure and employment-unemployment surveys. However, there was an intermediary stage, as usual in the earlier rounds, for the larger sample villages or blocks. In a larger sample village or block, it was split into a number of hamlet-groups or sub-blocks suitably to make the quantum of fieldwork manageable.

1.4 Sample size: A total of 10,384 first stage units (villages/blocks) were selected for the entire survey in the 55th round and 10162 villages/blocks were surveyed as per the details given below:

Item	Rural	Urban	Total
1. No. of villages/blocks surveyed	6046	4116	10162
2. No. of households surveyed for Consumer Expenditure	71385	48924	120309
3. No. of persons in the households surveyed for Consumer Expenditure	374856	225160	600016

Number of FSUs allotted and surveyed, number of households surveyed along with their number of persons for each State, UT and all-India were given in Statement T₀ of Section Three.

As noted at the end of Para 1.0, page 2, the number of first-stage units was reduced and the number of households per first-stage unit was increased in comparison with earlier 50th rounds.

1.5 Data presented in this report: This report presents basic results on household consumer expenditure at State and all-India level. It gives distribution of households and persons by value of monthly per capita expenditure, distribution of households by household size, averages of monthly per capita expenditure, consumption of cereals, break-up of these average values by important heads of consumption. Estimates are presented separately for rural and urban sectors. They are also given for the combined sector i.e. rural+urban. Estimated numbers of total males, females and children have also been provided. However, it is cautioned that these may be underestimates compared to Census projections.

1.6 Contents in brief: A key report (No. 454) has been released on the basis of the results of household consumer expenditure of NSS 55th round. The present report is the detailed version of the key report. It contains three sections and one appendix. Section One gives Introduction, Section Two Concepts and Definitions and the details of Sample Design and Estimation procedures are provided in Section Three. Section Four brings out the summary of Survey Findings. Appendix A gives the detailed tables, which have been used to prepare this report.

Section Two

Concepts and Definitions

2.0 The main concepts and definitions used in this report are given below.

2.1 **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word 'normally' means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered a single-member household except that a family living in a hotel (say) is considered to be one household only; the same applies to residential staff of such establishments.

2.2 **Adult:** A person who has completed 15 years of age.

2.3 **Household size:** The size of a household is the total number of persons in the household.

2.4 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely, (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

2.5 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear is considered to be consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipts in exchange of goods and services; (d) any other receipt through gift, charity, borrowing; and (e) free collection. Home produce is evaluated at the ex farm or ex factory prices. For evaluating the consumption of the items of group (iii), i.e. items categorised as miscellaneous goods and

services and durable goods, a different approach is followed. In this case, the expenditure made during the reference period for the purchase of goods and services is considered to be consumption.

2.6 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the guests, whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance, etc., made by the household are not considered consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item 'cooked meals' is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty in estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and of guests and employees will also be recorded in the purchaser household.

2.7 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept in mind while using the NSS consumer expenditure data for any nutritional studies relating to the nutritional status of households.

2.8 **Value of consumption:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory prices. Value of consumption out of gifts, loans, free collection and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.9 **Monthly per capita consumer expenditure (MPCE):** For a household, this is its 30 days' total consumer expenditure divided by its size. A person's MPCE is understood as that of the household to which he or she belongs.

2.10 **MPCE class:** The MPCE classes are normally revised during quinquennial rounds of Consumer Expenditure. Usually, 12 MPCE classes are formed from a table giving estimated cumulative percentage frequency distribution of persons by MPCE for each sector separately and also combinedly. These classes correspond broadly to 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 95% and 100% of population. The class limits are given below:

sl. no.	rural (in Rs)	urban (in Rs)	combined (in Rs)
1	0 - 225	0 - 300	0 - 235
2	225 - 255	300 - 350	235 - 265
3	255 - 300	350 - 425	265 - 320
4	300 - 340	425 - 500	320 - 365
5	340 - 380	500 - 575	365 - 410
6	380 - 420	575 - 665	410 - 460
7	420 - 470	665 - 775	460 - 520
8	470 - 525	775 - 915	520 - 605
9	525 - 615	915 - 1120	605 - 730
10	615 - 775	1120 - 1500	730 - 980
11	775 - 950	1500 - 1925	980 - 1285
12	950+	1925+	1285+

2.11 Major States: The term will be used to denote the following States of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

2.12 Reference period: For collecting data on consumption, the adoption of a reference period always involves a difficult choice. A short reference period (such as one day) gives rise to unstable data as a household's consumption expenditure fluctuates from day to day. A long reference period, on the other hand, can introduce a good amount of recall error into the data. The annual series of consumer expenditure surveys, up to the 49th round, used a uniform reference period of 'last 30 days' for all items of consumption. In the bigger surveys of the quinquennial series, an additional reference period of 'last 365 days' was used for some items of consumption – particularly, clothing, footwear and durable goods – but most results were tabulated using the 'last 30 days' data. During the 51st to 54th rounds, one-half of the sample of households was surveyed through schedule type I, which had a reference period of 30 days for all items. In the other half of the sample, a schedule (schedule type 2) with different reference periods for different items was tried out on an experimental basis. The reference periods for schedule type 2 were:

Food, pan tobacco and intoxicants: last 7 days

Fuel & light, miscellaneous goods & services,
and medical (non-institutional): last 30 days

Educational, medical (institutional), clothing,
footwear and durable goods : last 365 days.

During 55th round of NSS, information on consumption of food, pan, tobacco & intoxicants was collected independently for two different reference periods of 7 days and 30 days from the same households.

Another important feature of this round was that information in respect of consumption of clothing, footwear, durable goods, education and medical (institutional) services was collected only for one reference period of "last 365 days". In some of the

quinquennial rounds, information on these items was collected for two different reference periods - last 30 days and last 365 days - from the same households. The main results of 50th or other earlier quinquennial rounds were, however, based on a reference period of 30 days only for all the items. However, **This report presents data having reference period of “last 365 days” for clothing, footwear, education, medical (institutional) expenses and durable goods and “last 30 days” for rest of the items.**

2.13 Milk and milk products: This group includes *ghee*, butter, curds, ice cream, etc. Milk-based sweetmeats (*pera*, *rosogolla*, etc.) come under ‘beverages, refreshments and processed food’ unless they are prepared from milk, sugar, etc., within the household. In the latter case, consumption of milk, sugar, etc., is accounted separately instead of as a single item under ‘milk products’.

2.14 Beverages, refreshments, etc. (including processed food): This includes all beverages including tea, coffee, cocoa, cold drinks and various commercially produced beverages, biscuits and confectionery, salted refreshments, sweets, pickles, sauce, jams and jellies, and also cooked meals obtained on payment (see paragraphs 2.5 and 2.6).

2.15 Clothing: This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and matting, cotton yarn, wool and knitting wool. It, however, **excludes** tailoring charges, which come under ‘miscellaneous goods and services’.

2.16 Miscellaneous goods and services: Items of consumption other than food and drink (and substances chewed and smoked), fuel, clothing and footwear, educational and medical goods and services, rent, taxes and durable goods.

2.17 Taxes and cesses: This term includes only taxes and cesses which are levied on the household as a domestic consumer. It includes consumer licence fees such as are paid for possession of firearms, etc. It excludes income tax.

2.18 Education: Apart from educational expenses proper such as school and college fees, private tuition charges, textbooks, etc., this group of items includes expenses on newspapers and magazines, fiction and stationery. Donations to school fund, however, are excluded.

2.19 Institutional and non-institutional medical expenses: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred for medical treatment undergone as an in-patient of a medical institution (such as a hospital or nursing home) or otherwise. Medical expenses include expenditure on medicines and medical goods including family planning appliances, payments made for medical treatment, and expenses incurred for clinical tests.

2.20 Durable goods: Items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs and construction of durables used for domestic purpose is included in ‘expenditure on durable goods’.

Section Three

Sample Design and Estimation Procedure

3.1 Sample Design

3.1.1 **General:** A stratified sampling design has been adopted for selection of the sample first-stage units (FSU's). The FSU's are villages (panchayat wards for Kerala) for rural areas and Urban Frame Survey (UFS) blocks for urban areas. The Ultimate stage units (USU's) are enterprises for schedule 2.0 and households for schedule 1.0/ 10/ 10.1, which are selected by the method of circular systematic sampling from the corresponding frame in the FSU. Large FSU's are subdivided into hamlet-groups (rural)/ sub-blocks (urban), that are grouped into two segments, and USU's are selected independently from each of these segments.

3.1.2 **Sampling frame for first stage units:** List of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks are respectively used for selection of rural and urban sample FSU's. For selection of sample villages from the State of Jammu & Kashmir, list of villages as per 1981 Census has been used as the sampling frame. It may be mentioned that all the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 km of a bus route and inaccessible villages of Andaman & Nicobar Islands are left out of the survey coverage of the NSS 55th round.

3.1.3 Stratification

3.1.3.1 **Rural:** Two special strata are formed at the **State/ UT level** viz.

Stratum1: all FSUs with population between 1 to 100, and
Stratum2: FSUs with population more than 15,000.

[Note: The above two strata are spread across a given state and are not confined to any particular administrative division within the state.]

Above strata of either type are formed if at least 50 such FSU's are there in the respective frames. Otherwise, they are merged with the general strata.

While forming general strata (consisting of FSU's other than those covered under strata 1 & 2), efforts have been made to treat each district as a separate stratum. If limitation of sample size does not allow forming so many strata, smaller districts within a particular NSS region are merged to form a

stratum. Each district with rural population of 2 millions or more as per 1991 Census (1.8 millions or more as per 1981 Census in case of Jammu & Kashmir) is as usual split into a number of strata.

3.1.3.2 **Urban** : Strata are formed within NSS Regions as follows:

Stratum number	Composition of strata by considering population of various towns as per the 1991 Census
1, 3, 5 *	'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region)
2, 4, 6 *	Other blocks of each single city with a population of 10 lakhs or more
7	HA or IA or BA blocks of all towns with population between 50,000 and less than 10 lakhs
8	Other blocks of all towns with population between 50,000 and less than 10 lakhs
9	HA or IA or BA blocks of all towns with population less than 50,000
10	Other blocks of all towns with population less than 50,000

* Stratum numbers 3, 4, 5 & 6 remain void if there is only one city in an NSS region with a population of 10 lakhs or more.

If limitation of sample size does not allow forming so many strata, all blocks of stratum 7 are merged with those of stratum 8 and all blocks of stratum 9 are merged with those of stratum 10.

3.1.4 **Sample size** : A total number of 10,384 FSU's is selected for survey in the *central sample* at all-India level (rural & urban combined) in the 55th round. For *state samples*, there is a matching sample size as per the usual matching pattern being followed over the last few rounds. Sample sizes for the whole round for each State/UT and Sector (i.e. rural/ urban) are allocated equally among the four sub-rounds. Sample FSU's for each sub-round are selected afresh in the form of two independent sub-samples. The details of allocation and survey of FSUs, households and persons are given in Statement T₀.

3.1.5 **Allocation of first-stage units (FSU's)**: State/ UT level rural sample size is allocated among the rural strata in proportion to population. State/ UT level urban sample size is first allocated among the three classes of towns (i.e. 10 lakh +, 50000 to less than 10 lakhs and less than 50,000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, is further allocated between two strata types consisting of - (i) HA/ IA/ BA blocks, and (ii) the rest in proportion to total number of FSU's in the respective frames with double weightage given to the first category of blocks. Stratum level allocations for both rural and urban areas of a sub-round are made in even numbers in order to facilitate selection of FSU's in the form of two independent sub-

samples. Sub-sample numbers are 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4.

3.1.6 Selection of first-stage units: For each sub-round, sample FSU's from each stratum are selected in the form of 2 independent sub-samples by following circular systematic sampling with (a) probability proportional to population for all rural strata other than stratum 1, and (b) equal probability for rural stratum 1 as well as all urban strata.

3.1.7 Formation of hamlet-groups in large villages and number of hamlet-groups selected for survey : Depending upon the values of approximate present population (P) and approximate total number of non-agricultural enterprises (E), decision is taken to divide the FSU into a fixed number of hamlet-groups (hg's - the term applicable for rural samples) / sub-blocks (sb's - the term applicable for urban samples) as per the rules given below:

Value of P	No. of hg's/ sb's formed in the FSU as per population criterion	value of E	no. of hg's/ sb's formed in the FSU as per enterprise criterion
(1)	(2)	(3)	(4)
Less than 1200	1 @	Less than 100	1 @
1200 – 1999	5	100 – 249	5
2000 – 2399	6	250 – 299	6
2400 – 2799	7	300 – 349	7
2800 – 3199	8	350 – 399	8
(and so on)		(and so on)	

@ no. of hb's/ sb's = '1' means the whole FSU is considered for listing.

[For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hg's formed in the village as per population criterion is : 1 for $P < 600$, 5 for $P = 600$ to 999, 6 for $P = 1000$ to 1199, 7 for $P = 1200$ to 1399, 8 for $P = 1400$ to 1599, and so on.]

The number (D) of hamlet-groups (hg)/ sub-blocks (sb) formed in the FSU is such that the higher of the two values as per population and enterprise criteria is chosen. If value of P is less than 1200 (600 for certain hilly areas specified above) as well as value of E is less than 100 for an FSU, hg/ sb formation is not resorted to and the whole FSU is considered for listing. In case hg's/ sb's are formed in the sample FSU, the same is done by more or less equalizing population.

3.1.8 Formation of Segments within FSU: The hg/ sb having maximum concentration of non-agricultural enterprises is selected with certainty for listing of households/ enterprises. This hg/ sb is referred to as segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's are selected circular systematically and these 2 selected hg's/ sb's together is referred to as segment 2 for doing a combined listing of households/ enterprises. Thus listing of households/ enterprises is done only in segments 1 and 2 of the FSU. The FSU not requiring hg/ sb formation is to be treated as **segment 1** for the purpose of data collection and estimation.

3.1.9 Stratification of households : All the households listed in a segment (both rural & urban) are stratified into two second stage strata, viz. ‘affluent households’ (forming second stage stratum 1) and **the rest** (forming second stage stratum 2). In rural sector, a household is classified as ‘affluent’ if the household owns certain items like motor car/ jeep, colour TV, telephone, etc. or owns land / livestock in excess of certain limits. In urban sector, the households having MPCE (monthly per capita consumer expenditure) greater than certain limit for a given town/city are treated as ‘affluent’ households for the present survey and are included in the frame of second stage stratum 1, and rest of the urban households are included in the frame of second stage stratum 2.

3.1.10 Number of households/ enterprises selected for survey: The number of households/ enterprises selected for survey from each FSU in general is given below:

segment (1)	number of households allotted for consumer expenditure schedule		
	SSS		
	1 (2)	2 (3)	total (4)
FSU with hg/ sb formation:			
1	1	3	4
2	1	7	8
FSU with no hg/ sb formation:			
1	2	10	12

(‘SSS’ means second-stage stratum)

3.2 Estimation Procedure:

3.2.1 General procedure of selection of households: Sample households are selected from the respective frames by circular systematic sampling with equal probability. For the purpose of systematic sampling, households in the frame of 2nd stage stratum 2 are arranged by means of livelihood by land possessed classes for rural samples and by means of livelihood by MPCE classes for urban samples.

3.2.2 Approach: This estimation procedure fulfils the twin objectives of providing (a) estimates on sub-round basis, and (b) the estimate of error from the sub-sample replicates. Tabulated estimate for a sub-round is obtained by combining the estimates of the corresponding sub-sample replicates. Similarly, a tabulated estimate of the Round is obtained by combining the four sub-round-wise estimates

3.2.3 The following notations are being used in this section:

- a = subscript for the a-th stratum
- r = subscript for the r-th sub-sample replicate (r = 1,2,...,8)
- q = subscript for the q-th sub-round (q = 1,2,3 & 4)
- f = subscript for the f-th sampled village/ block as First Stage Unit (FSU)

- s = subscript for the s-th segment of sampled village/ block (s = 1 & 2)
c = subscript for the c-th 2nd stage stratum of households in the sampled village/ block (c = 1,2)
j = subscript for the j-th sampled household
p = subscript for pooled estimate
z = size used for selection of an FSU from the sampling frame
Z = total of sizes in the sampling frame for the stratum

[Note: For urban sector, z=1 and Z=N which is the total number of UFS blocks (FSU's) in the frame.]

- n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases but excluding casualty and not reported cases) and used for tabulation
L= number of sub-sample replicates surveyed and used for tabulation
D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU
H = total number of households listed in the appropriate frame
h = number of sampled households surveyed and used for tabulation from the frame
E = total number of enterprises listed in the appropriate frame
e = number of sampled enterprises surveyed and used for tabulation from the frame
y, x = value of characteristic y, x obtained in the sample
 \bar{y}, \bar{x} = estimated value of the total of characteristic y, x obtained from the sample.

3.2.4 ESTIMATES OF AGGREGATE: In the formulae given in this section, \bar{y} is the estimate of aggregate of a characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r). These formulae are provided for the general case of FSU's having two segments 1 & 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero for estimating a characteristic of household from a given 2nd stage stratum (c) in the selection frame

$$\text{Rural : } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{Z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad (1)$$

$$\text{Here } B_{fsc} = \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 1 (s=1) and } B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 2 (s =2).}$$

$$\text{Urban: } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad \dots(2)$$

$$\text{Here } B_{fsc} = \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 1 (s=1) and } B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 2 (s =2).}$$

Note: For tabulating any characteristic from this detailed schedule $\hat{Y} = \sum_c \hat{Y}_c$ is to be used.

3.2.4.1 COMBINED ESTIMATE FROM SUB -SAMPLES: In the previous section, the estimate of the total of a characteristic \hat{Y} as obtained for a stratum (a), for a particular sub-round (q) and a sub-sample replicate (r), actually represents \hat{Y}_{aqr} . The combined /pooled estimate for a particular stratum and a particular sub-round is computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{aqr} \quad \dots(3)$$

3.2.4.2 ESTIMATE OF AGGREGATES FOR A SUB-ROUND AT STATE/ UT/ REGION LEVEL: If \hat{Y}_{qr} be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and \hat{Y}_{qp} , the combined/ pooled estimate of the aggregate based on the whole sample, for a given sub-round q, then

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{aqr} \quad \dots(4)$$

based on sub-sample replicate group r, and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \dots(5)$$

based on all sub-sample replicates.

3.2.4.3 ESTIMATES OF AGGREGATE FOR THE ROUND (i.e. all the 4 sub-rounds together) AT STATE/ UT/ REGION LEVEL: The estimates of aggregates for the whole round are computed as the simple average of the sub-round estimates and are given below:

$$\hat{Y}_r = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qr} \quad \dots(6)$$

based on sub-sample replicate 1 and 2*and

$$\hat{Y}_p = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qp} \quad \dots(7)$$

based on whole sample.

**Note: In the Round, sub-samples 1, 3, 5 & 7 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 1 (annual) while sub-samples 2, 4, 6 & 8 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 2 (annual). This has been followed in the remaining sections also. Stratum level estimate for the Round is obtained similarly.*

3.2.5 ESTIMATES OF RATIO: If \hat{X} & \hat{Y} be the State/ UT/ Region level aggregate estimates corresponding to variables x and y, then the estimate of ratio is given below:

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \dots(8)$$

based on sub-sample group r, and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \dots(9)$$

based on the whole sample.

The formulae for \hat{X} are obtained similarly by replacing \hat{Y} by \hat{X} and y by x in the above formulae stated in previous sections.

Note: Estimates for the sub-round \hat{R}_{qr} and \hat{R}_{qp} has been be obtained by replacing \hat{Y}_r and \hat{Y}_p by \hat{Y}_{qr} and \hat{Y}_{qp} , respectively and \hat{X}_r and \hat{X}_p by \hat{X}_{qr} and \hat{X}_{qp} , respectively.

3.2.6 ERROR ESTIMATE : The estimated variances of pooled estimates (as computed above) are calculated on the basis of sub-sample replicate estimates of strata over State/ UT/ Region and obtained as follows:

$$\hat{V}ar(\hat{Y}_p) = \frac{1}{L(L-1)} \sum_a \sum_{r=1}^L [(\hat{Y}_{ar} - \hat{Y}_{ap})^2] \quad (10)$$

$$\hat{M}SE(\hat{R}_p) = \frac{1}{L(L-1)\hat{X}_p^2} \sum_a \sum_{r=1}^L [(\hat{Y}_{ar} - \hat{Y}_{ap})^2 + \hat{R}_p^2 (\hat{X}_{ar} - \hat{X}_{ap})^2 - 2\hat{R}_p (\hat{Y}_{ar} - \hat{Y}_{ap})(\hat{X}_{ar} - \hat{X}_{ap})] \quad \dots(11)$$

Note: Such estimates for the sub-round have been obtained by suitable replacement as stated in 3.5.

3.3 TREATMENT FOR CASUALTY: (I) If $H_{fsc} > 0$ but $h_{fsc} = 0$ for a particular 2nd stage stratum of households in a FSU with no hamlet-group/ sub-block formation (ie. $D_f = 1$), it is a case of casualty and the value of n will be reduced by 1.

II) If $D_f > 1$ and $H_{fsc} > 0$ but $h_{fsc} = 0$ for $s=1$ (say, s') and if it is not a case for the entire FSU, here n will not be reduced by 1 and in this case $[(D_f - 1)/2] \times H_{fsc}$ will be replaced by $\{H_{fsc} + [(D_f - 1)/2] \times H_{fsc}\}$ in the formula for $s=2$.

III) If $D_f > 1$ and $H_{fsc} > 0$ but $h_{fsc} = 0$ for $s=2$ (say, s') and if it is not a case for the entire FSU, here n will not be reduced by 1 and in this case, H_{fsc} will be replaced by $\{H_{fsc} + [(D_f - 1)/2] \times H_{fsc}\}$ in the formula for $s=1$.

IV) If $H_{fsc} > 0$ but $h_{fsc} = 0$ for a particular 2nd stage stratum of households in both the segments ($s = 1$ & 2) in an FSU, it is a case of casualty and the value of n will be reduced by 1.

Cases with $n = 0$ at stratum level, if any, have been referred to SDRD for suggesting measures before tabulation.

Section Four

Survey Findings

4.0 The NSS survey of household consumer expenditure generates, first and foremost, a very important indicator of human living standards called monthly per capita consumer expenditure (MPCE). The present report as before brings out various facets of this indicator. At first, average MPCE at all-India and state level for rural and urban sectors, and the distributions of households and persons by MPCE for each state and sector, will be presented. The absolute and percentage composition of MPCE by items of consumption, which is also available for each state and sector, will be taken up next. Inter-state and rural-urban variation in consumption of cereals - the major constituent of the Indian diet - will be studied through the estimates obtained of per capita quantity and value of cereal consumption. Finally, the results of this round will be compared with those of earlier rounds of NSS.

The major findings of the survey are given below.

4.1 Population structure

4.1.1 Statement 1 presents some key indicators of population in India for the bottom MPCE (monthly per capita expenditure) and top MPCE classes. About 75% of the population of the country was found to reside in rural areas and 25% in urban areas. The rural population contained 900 females per 1000 males and the urban, 941 females per 1000 males.

4.1.2 Average household size in rural India was 5.0 including 1.9 "children" per household. In urban India average household size was 4.5 with 1.4 "children" per household. In lower MPCE classes, average household sizes were, as usual, much higher than the "all classes" average. At the all-India level average rural household size declined steadily from 6.0 in the lowest MPCE class to 3.6 in the highest. In urban areas the decline was from 6.2 to 2.9. The difference was accounted mainly by the under-15 age group. The average number of under-15 members per rural household is seen to decline from 3.0 in the lowest MPCE class to 0.7 in the highest class. In urban India the average number of "children" per household is less than 0.9 in the highest MPCE class.

4.1.3 State-level averages of household size are shown in column 15 of Statements 2R & 2U. It is seen that inter-state variation in household size was more pronounced than rural-urban variation. The lowest averages are seen in Tamil Nadu (3.9-4.0) and Andhra Pradesh (4.1-4.2). The highest averages were in the rural areas of Haryana, Rajasthan and Uttar Pradesh (5.6 or more).

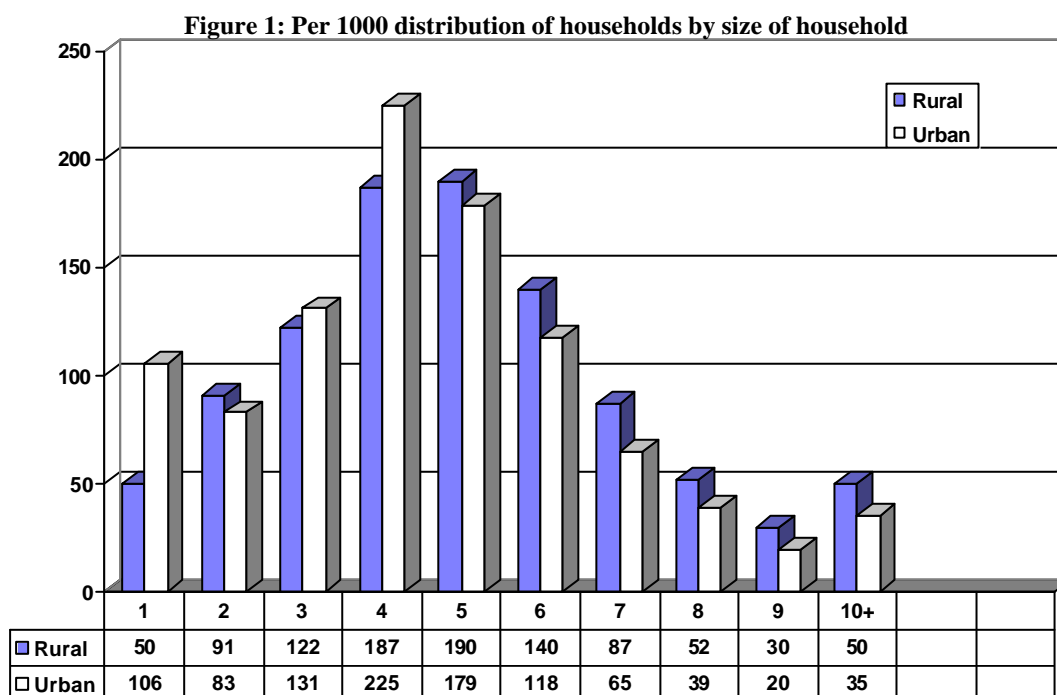

Statement 1: Demographic differences between lowest and highest MPCE classes

all-India						
population characteristic	rural			urban		
	bottom* 5%	top* 5%	all	bottom* 5%	top* 5%	All
(1)	(2)	(3)	(4)	(5)	(6)	(7)

* ranked by MPCE

4.2 Distribution of household size

4.2.1 The distributions of rural and urban households by household size for different States

and all-India are presented in Statements 4R & 4U. The all-India distributions of household size for rural and urban sectors are presented graphically in Figure 1. It reveals the following:

- Households with 4 or 5 members accounted for around 40% of all rural or urban households in India.
- Single-member households formed 11% of all urban households and were more common than households with 2 members. A large proportion of such households were probably formed by persons living away from their families and near their place of work for economic reasons.

4.2 Distributions of households and persons by MPCE: sectoral and inter-state comparison

4.3.1 Statements 2R and 2U show distributions of households over 12 classes of MPCE for each state and UT, for rural and urban sectors respectively. Statements 2R and 2U show the corresponding distributions of persons. Also, a chart (Figure 2) giving percentage of population below different levels of MPCE has been provided. It shows that the rural population is more concentrated in the lower levels of MPCE than their counterpart in urban areas. For example, the population having average MPCE below Rs 670 accounts 84% in rural areas while it accounts only 50% in urban areas.

4.3.2 It may be observed that level of consumption in urban sector is much higher than the rural sector. In rural sector, 10% of population of the country as a whole had MPCE below Rs 255 where as in urban sector the corresponding 10% had MPCE below Rs 350. Similarly, top 10% of population in rural sector had MPCE Rs 775 or more where as for urban sector, Rs 1500 or more.

4.3.3 The inter-state variation is substantial in the distribution of population by MPCE in each of the two sectors. Among the major states, very few were found to have distributions similar to the all-India distribution. For the rural sector, Tamil Nadu, Karnataka were "representative" states in this respect. For the urban sector, Andhra Pradesh, West Bengal and Maharashtra can be said to have had distributions similar to the all-India "average" distribution.

4.3.4 At state level, the percentage of persons in the rural sector below the MPCE level of Rs 255 ranged from 0% for Goa to 26% in Orissa. Among major states this figure is high in Orissa, Madhya Pradesh (19%) and Bihar (16%) and low in Punjab (0.6%), Haryana (1%) and Kerala (1%). For the urban sector the percentage of persons below Rs 350 is high in Bihar (26%), Orissa (21%), UP (19%) and Madhya Pradesh (16%) and low in Punjab (3%), Gujarat (4%) and Haryana (4%).

4.3.5 Among the major States, the percentage of population with MPCE exceeding Rs 775 ranged from 3% (Bihar) to 34% (Kerala) in the rural sector. The figure is high in Kerala, Punjab (33%) and Haryana (32%) and low in Bihar, Assam and Orissa (4%), MP (5%) and WB (6%). In the urban sector, too, the lowest percentage was shown by Bihar. However, the range of variation in urban sector was much narrower.

Figure 2: Percentage of population below different levels of MPCE all-India

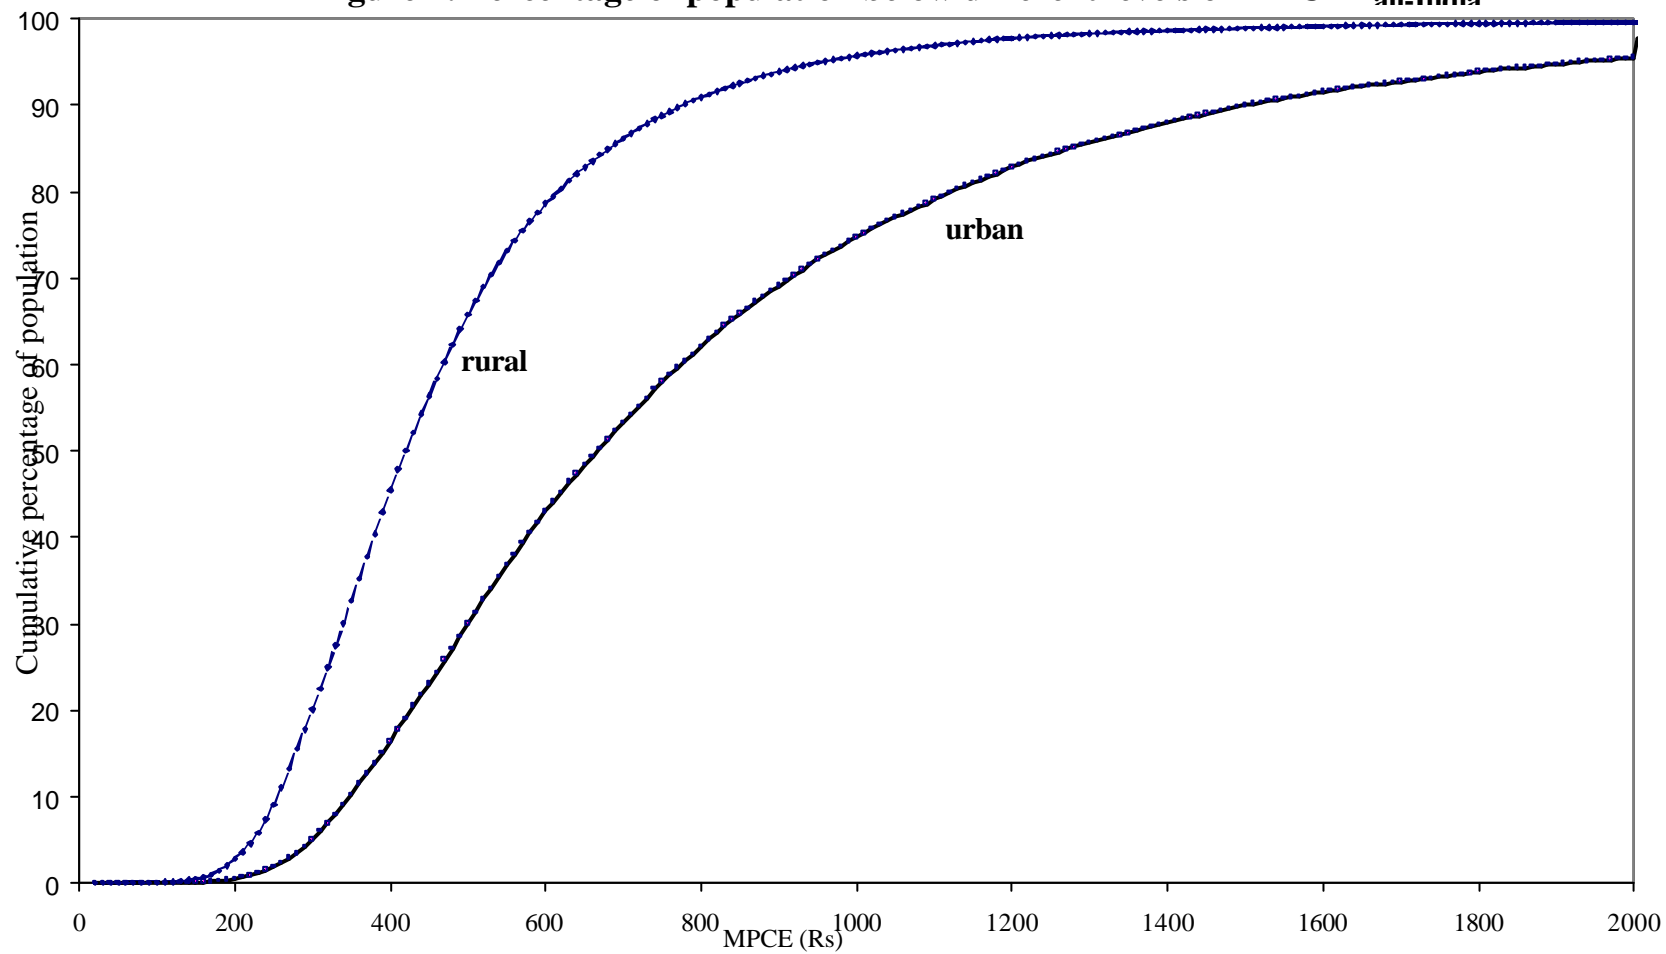

Figure 3R : Percentage of population with MPCE below Rs 255 for major states and all-India : Rural

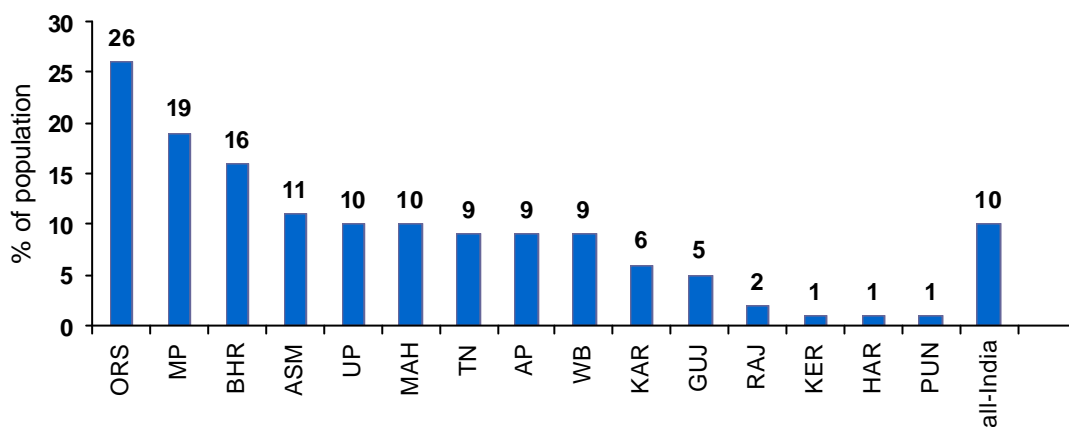

Figure 3U: Percentage of population with MPCE below Rs 350 for major states and all-India : Urban

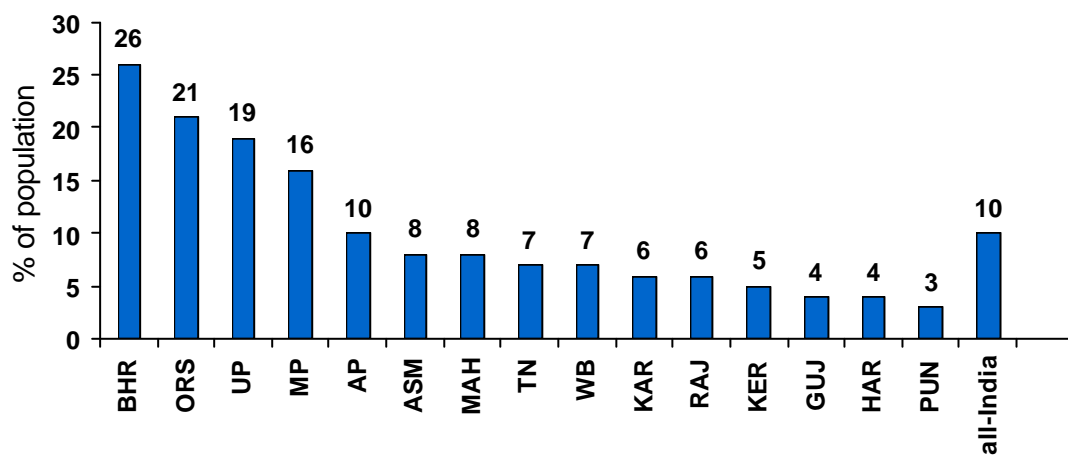

Figure 4R: Percentage of population with MPCE above Rs 775 for major states and all-India : Rural

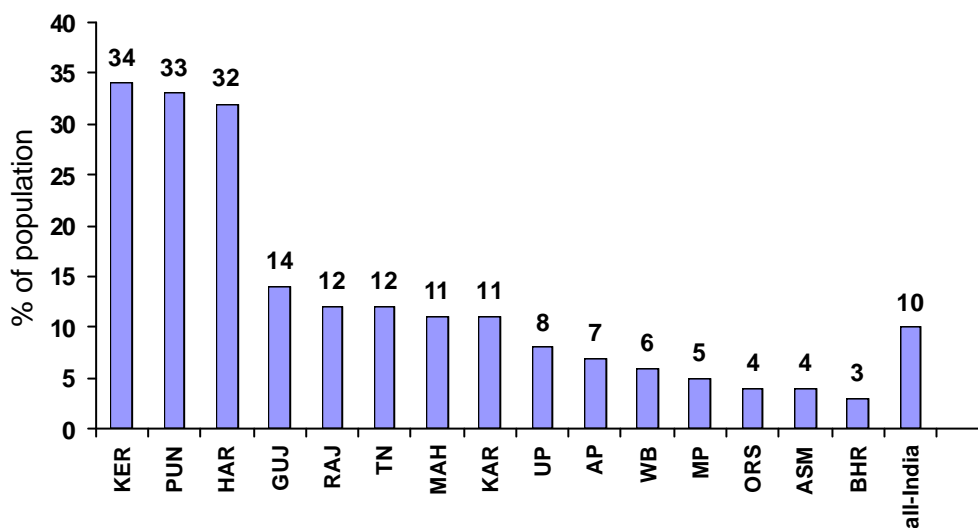

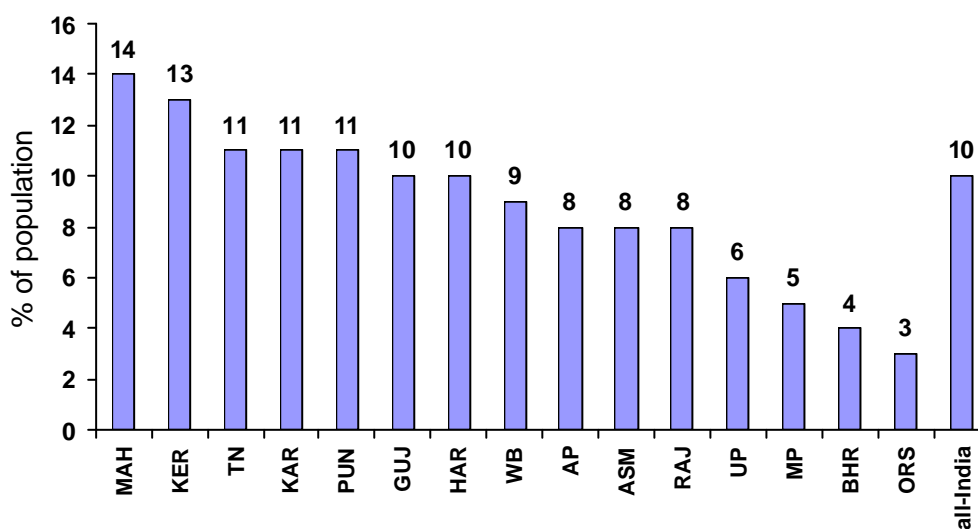

Figure 4U: Percentage of population with MPCE above Rs 1500 for major states and all-India : Urban

4.3.6 The percentage of population having MPCE below Rs 255 and MPCE Rs 775 or more in rural India has been graphically presented in Figures 3R and 4R, respectively. Similarly, the percentage of population having MPCE below Rs 350 and Rs 1500 or more has been given in Figures 3U and 4U. In these figures, the states have been arranged in descending order. These charts give an idea of the level of living of the people of different states. Bihar and Orissa have higher proportion of persons having low MPCE in both rural and urban areas. This proportion is low in Haryana and Punjab. As implied by the above, the proportion of persons having high MPCE is less in Orissa and Bihar. But this proportion is not very high in urban Punjab and Haryana although it is high in rural Punjab and Haryana.

4.3.7 For each state/u.t. and all-India, Table 1 of the Appendix gives, in addition to information on distributions of households and persons over classes of MPCE, some idea of average household composition, in terms of number of adult males, adult females, male children and female children per household, in each of the twelve MPCE classes. (Numbers per 1000 households are shown in order to avoid decimal points; division by 1000 yields per household figures.)

4.4 Average MPCE: states and all-India

4.4.1 Averages of MPCE for each state, UT and all-India are shown in the map of India MPCE (Figures 5R & 5U).

4.4.2 The all-India rural average of MPCE was Rs 486. At state level, average MPCE was over Rs 370 and below Rs 975 in all 15 major states. Average MPCE was below Rs 385 in two of these states, between Rs 400 and Rs 551 in 10 states, and above Rs 770 in three States.

4.4.3 All-India average MPCE in the urban sector was Rs 855. State-level average MPCE exceeded Rs 600 for all 15 major states, and was in the range Rs 600-975. For two states, and Maharashtra and Tamil Nadu average urban MPCE was around Rs 970.

4.4.4 Average urban MPCE exceeded average rural MPCE by more than 60% at the all-India level. In contrast to the rural sector, where average MPCE was seen to exceed Rs 400 in only one state, all urban state-level MPCE averages except two - those of Bihar and Uttar Pradesh - were above Rs 400. Punjab, Haryana and Kerala were among the top five states in terms of MPCE in both sectors. For Bihar, per capita consumer expenditure was lower than the all-India average by Rs 63 in the rural sector, and by Rs 105 in the urban.

4.5 Per capita expenditure on different items of consumption: all-India

4.5.1 Statements 5R and 5U show the break-up of MPCE by item group and the corresponding percentage composition of the total MPCE is given in Statements 6R & 6U for each state UT and all-India. More detailed information on consumption pattern is available in Table 5 of the Appendix, where the item break-ups of value of consumption are given separately for different segments of the population classified by MPCE.

4.5.2 Looking at the **all-India** columns of Statements 5R and 5U, a picture of "average" rural and urban consumption patterns for the country as a whole emerges. The following are the main features.

4.5.3 For rural India, per capita 30 days' consumer expenditure of Rs 486 was split up into Rs.289, on an average, for food, and Rs 197 for non-food. Food included Rs 108 for cereals and cereal substitutes, and Rs 91 for milk, milk products, vegetables and edible oil. Non-food included Rs 37 for fuel and light, and Rs 39 for clothing and footwear.

4.5.4 For the urban sector, average MPCE of Rs 855 split up into Rs 411 for food and Rs 444 for non-food. Of food expenditure, Rs 106 went towards cereals while Rs 145 was spent on milk, milk products, vegetables and edible oil. Rs 66 was spent per person on fuel and light, and Rs 62 on clothing and footwear.

4.5.5 Rural expenditure levels per capita exceeded urban levels for all the item groups except cereals and cereal substitutes. However, the per capita expenditures for 30 days on cereals and cereal substitutes for rural and urban areas are very close to each other.

4.5.6 Of the gap between urban and rural MPCE, which is of the order of Rs 370, as much as Rs 133 was accounted by the category "miscellaneous goods & services" (which includes transport, educational and medical expenses, expenses on non-durable non-food articles such as toilet articles, rents, and most consumer services). The two groups "beverages, refreshments & processed food", and "milk & milk products", together account for another Rs 65 of the difference.

4.5.7 Non-food expenditure per person in the urban sector was more than double of the rural sector, where it is below Rs 200.

4.6 Percentage break-up of MPCE by item group: all-India

4.6.1 Statements 6R and 6U express the figures of Statements 5R and 5U as percentages of total MPCE, for each state and all-India. Examination of the all-India columns reveals that, for the country as a whole,

(a) The shares in total MPCE of quite a number of item groups, including "milk & milk products", "meat, fish & egg", "fuel & light", "clothing", "footwear" and "medical (institutional)" were more or less equal in the two sectors.

(b) Important rural-urban differences were present in the share of cereals (rural share exceeding urban by 10 percentage points), and in case of "miscellaneous consumer services" and "education" (both of which had a larger share in the urban sector than in the rural).

Figure 5R: Average MPCE (Rs) by state

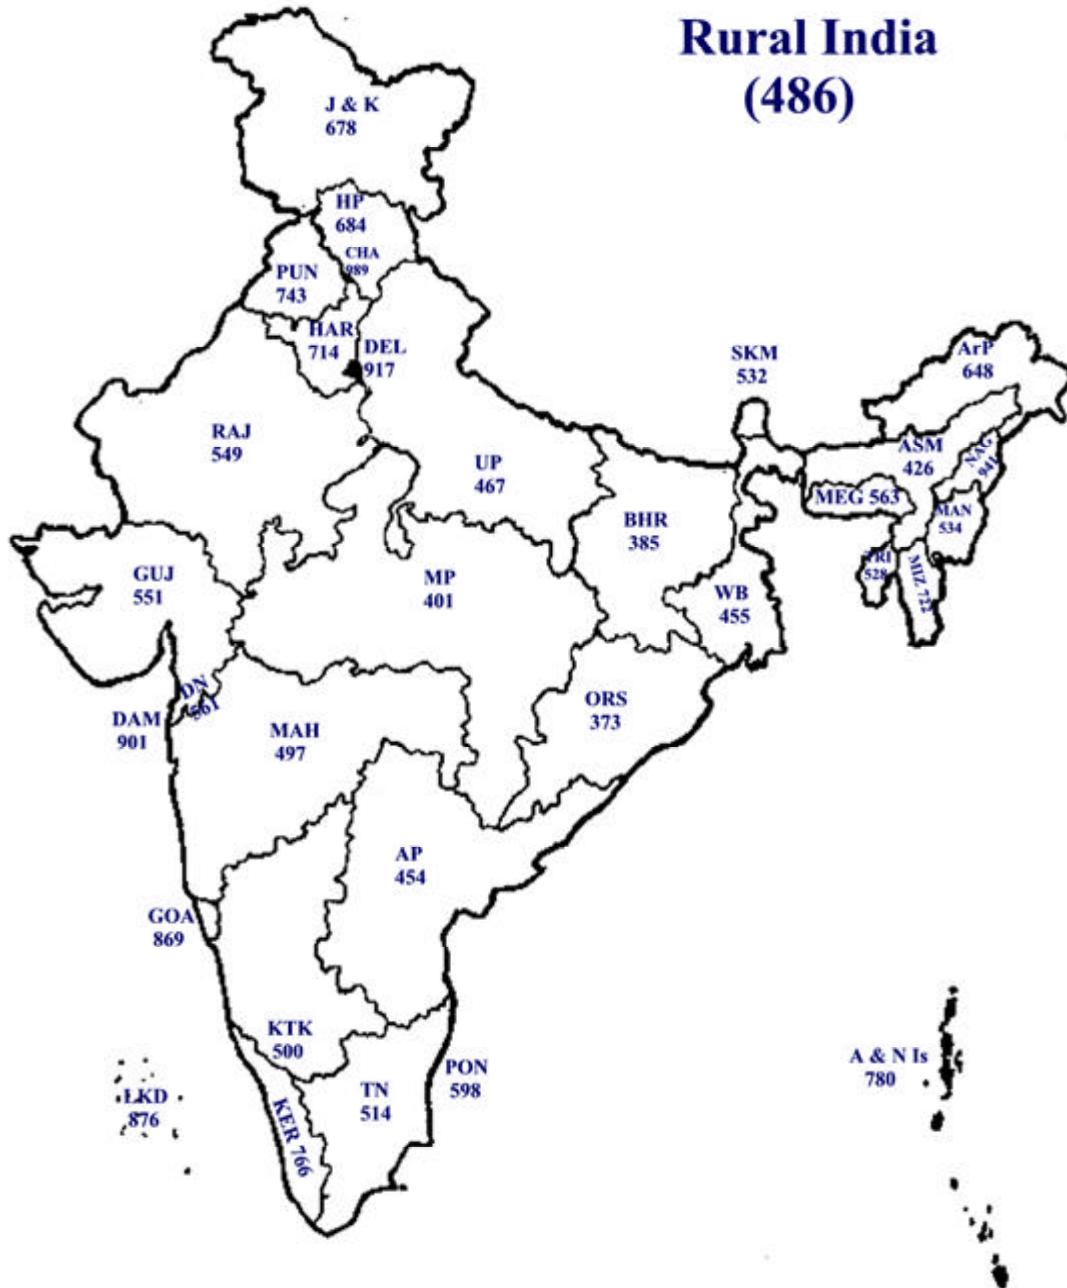

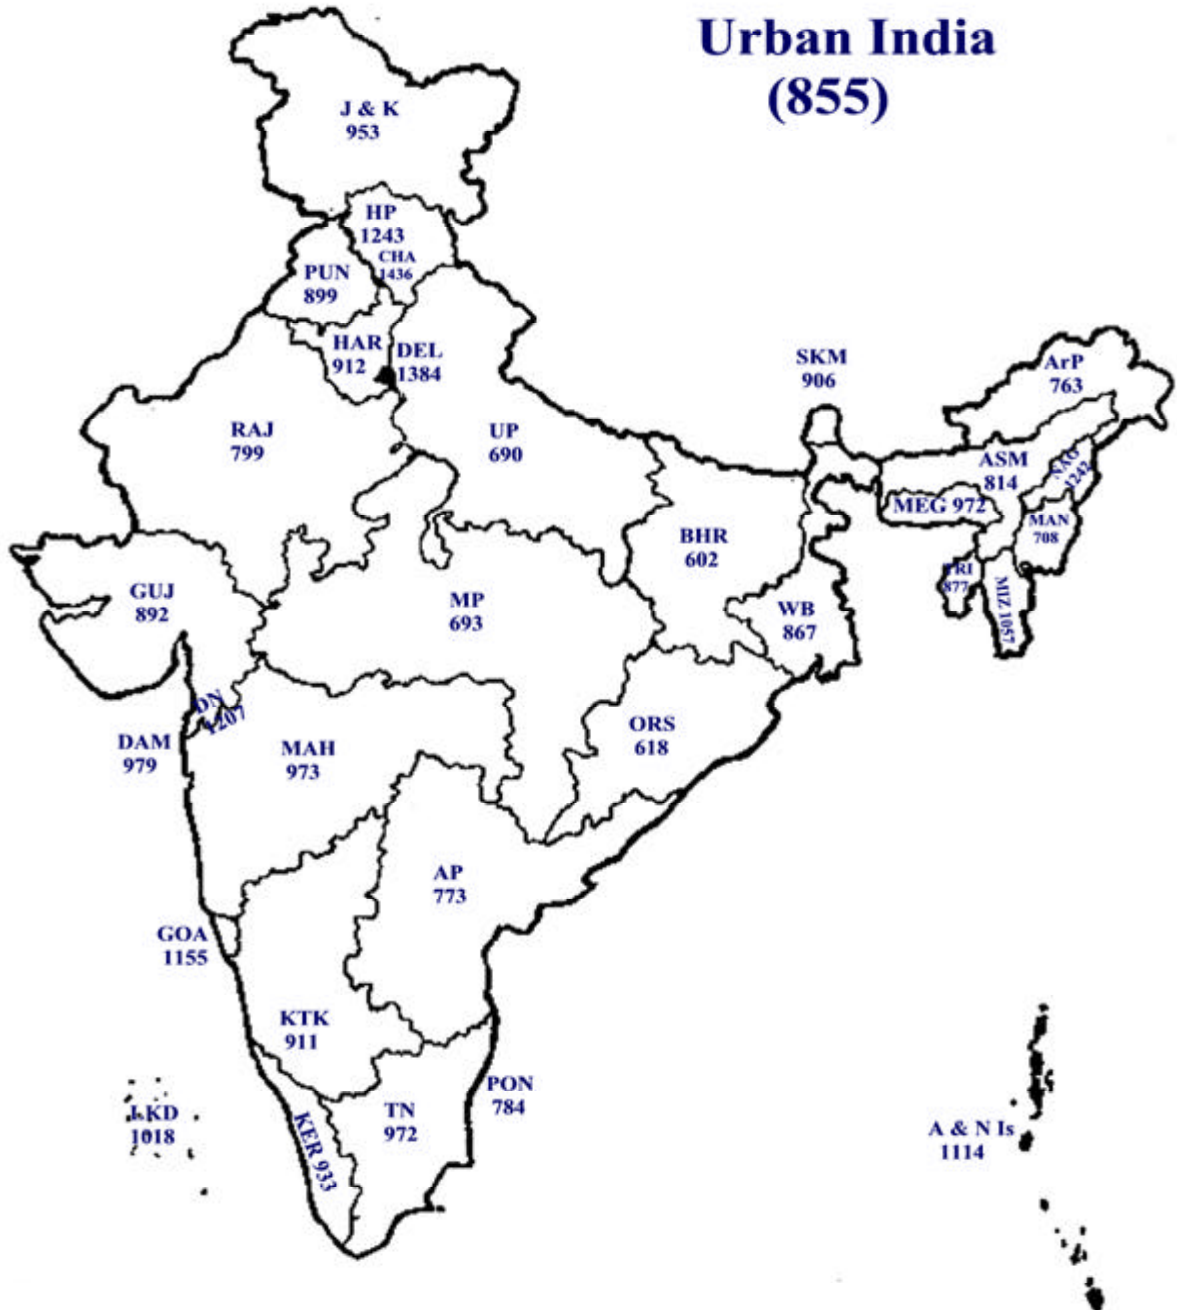

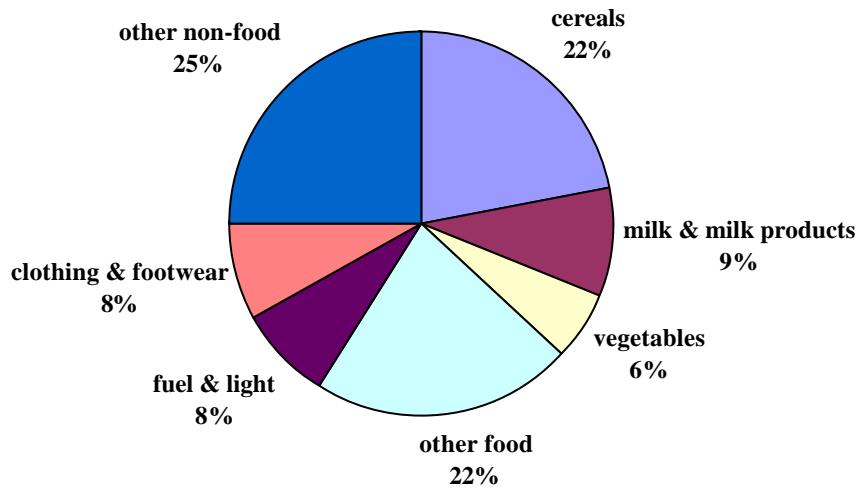

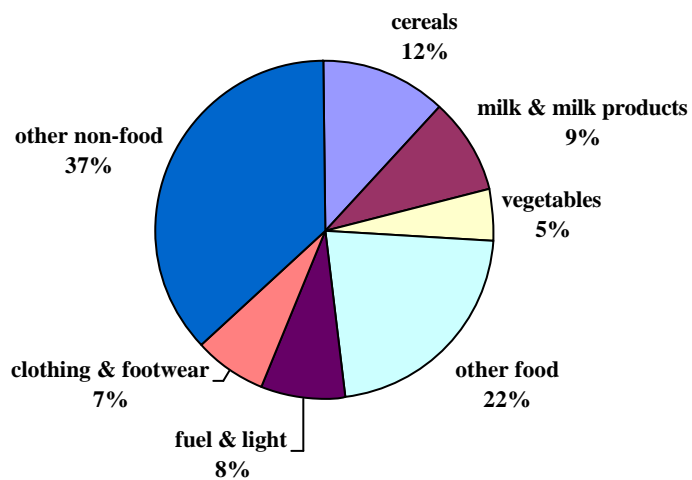

Figure 5U: Average MPCE (Rs) by state

**Figure 4R: Percentage Composition of Consumer Expenditure
Rural India**

**Figure 4U: Percentage Composition of Consumer Expenditure
Urban India**

4.7 Per capita expenditure on different item groups: inter-state variation

4.7.1 One may now turn to inter-state differences in consumption pattern as revealed by Statements 5R and 5U and also by Statements 6R and 6U.

4.7.2 For the rural sector of the country, state-level food expenditure per person varied in the range Rs 230-Rs 410 for the 15 major states. Punjab, Kerala and Haryana, which were seen earlier to have the highest levels of average MPCE in the rural sector, can be seen to have incurred the highest per capita food expenditures as well. Likewise, food expenditure per person is found to have been lowest in the states ranked poorest in terms of MPCE, namely, Bihar, Orissa and Madhya Pradesh. Per capita non-food expenditure appears to have varied more unevenly among states. It was under Rs 140 for 3 of the major states - Bihar, Orissa and Assam - and exceeded Rs 525 for only two states among the major states viz. Punjab and Kerala in the rural sector.

4.7.3 Within the urban sector inter-state variation in average food expenditure per person was slight, compared to the rural sector. Among the major states, the highest state average was Rs 457 and the lowest, Rs 330. Non-food spending levels were markedly higher than in rural areas. There are 9 out of the 15 major states where per capita non-food expenditure was above Rs 400. But the highest per capita non-food expenditure in the rural sector was in Punjab and it was Rs 355. For rural areas of seven major states, the figure was below Rs 200.

4.7.4 In the urban sector high levels of per capita expenditure on cereals (Rs 153) and "meat, fish & egg" (Rs 69) are seen to have raised Assam's food expenditure per person to Rs 451, while for Punjab and Haryana it is expenditure on "milk & milk products" which pulled up their per capita food expenditures above the national average. In the rural sector Madhya Pradesh ranks lowest (Rs 233) among the major states in food expenditure.

4.7.5 A comparison of the various columns of Statements 6R & 6U brings out the diversity in consumption patterns in different regions of the country in great detail. The statement can be used to identify the item groups such as "vegetables", or "fuel & light", for which the percentage-to-total-MPCE figures for the different states lie closely around the national average, and other item groups, such as "milk & milk products", or "meat, fish & egg", where there is considerable heterogeneity in consumption levels in the country.

4.7.6 The share of food in total expenditure is seen to have exhibited little variation from state to state, especially for urban areas. It ranged from 53% (Kerala) to 68% (Assam) in the rural sector, and from 45% (Haryana) to 57% (Bihar) in urban sector among the 15 major states. Within a state, the share of food in the rural sector exceeded that in the urban by 5-13 percentage points.

4.8 Consumption of cereals

4.8.1 Statements 7R and 7U show per capita quantity of monthly consumption of cereals per person at state and all-India level. The corresponding per capita quantities and values of monthly consumption of cereals per person at state and all-India level have been shown in Statements 8R

and 8U. It may be noted here that value of consumption of home produce is imputed at ex farm prices. The following points are of interest.

(a) All-India per capita monthly consumption of cereals was 12.7 kg in the rural sector and 10.4 kg in the urban. The break-up by different cereals is given in Figure 7.

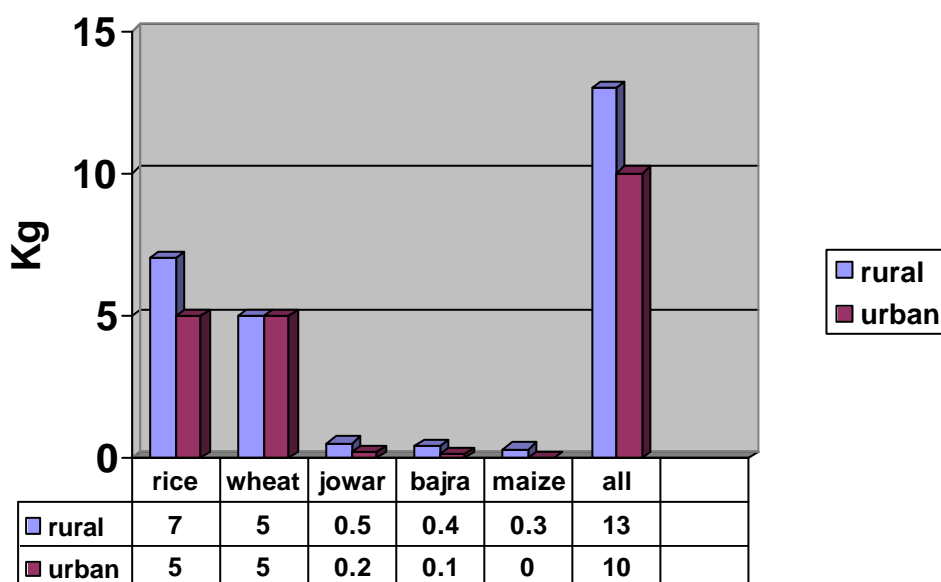

(b) Rice and wheat together accounted for 11.3 kg of per capita monthly cereal consumption in the rural sector and 10.0 kg in the urban. About 400 gm of cereals other than rice and wheat, therefore, was consumed per person per month in the urban sector of the country as a whole. Consumption of jowar was largely confined to Karnataka and Maharashtra, and of bajra, to Gujarat and Rajasthan. In all other states rice and wheat accounted for more than 800 gm of each kilogram of cereal consumed.

(c) Wheat was the only cereal for which per capita consumption in urban areas exceeded that in rural areas at the all-India level.

(d) Per capita consumption of cereals in rural areas is uniformly higher than that in urban areas for all major states.

(e) Value of average monthly consumption of cereals was around Rs 108 for the rural sector and Rs 106 for the urban sector of the country as a whole.

Figure 7: Per capita consumption (kg) of cereals over a period of 30 days

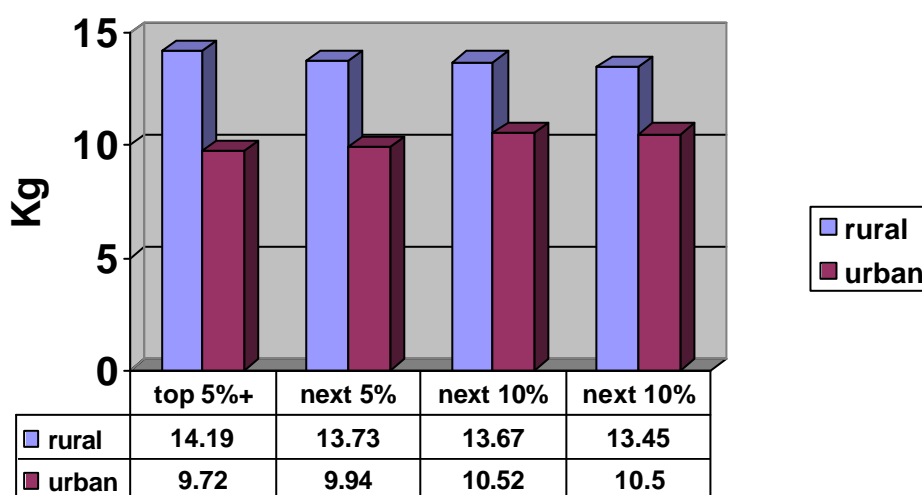

(f) As one moves from lower MPCE to higher MPCE households, per capita quantity of cereal consumption in the urban sector reaches a plateau at the level of about 10.7 kg beyond which it does not rise with further increase in MPCE. No such "saturation level" of cereal consumption is, however, observed in the rural sector, where per capita consumption continues to increase up to the highest MPCE class. Per capita cereal consumption in the upper MPCE range has been depicted in Figure 8.

(g) While average quantity of cereals consumed per person over a period of 30 days varied only from 9.9 to 13.8 kg in the rural sector and only from 8.5 to 12.7 kg in the urban sector for all major states except Orissa (where it exceeded 15 kg in rural and 14.5 kg in urban), value of cereals consumed per capita per month varied over the major states from Rs 75 to over Rs 140 in both sectors. In particular, the population in the eastern and north-eastern states of Assam, West Bengal, Bihar and Orissa spent around Rs 140 – Rs 150 on cereals per person per month in both rural and urban areas. Value of per capita cereal consumption was only about Rs 80 in both sectors for only two major states - Punjab and Haryana.

4.8.2 More detailed information on cereal consumption is available in Tables 3 and 4 of the Appendix. Table 3 gives quantity in kilograms of per capita consumption during a period of 30 days of important cereals, cereal substitutes and pulses by state/UT for 12 MPCE classes of population in each sector. Table 4 gives values in rupees of the quantities shown in Table 3.

Figure 8: Per capita cereal consumption in the upper MPCE range

4.9 Percentage of households reporting consumption of different groups of items

4.9.1 Column 15 of Table 5 gives, for each item group, per 1000 number of households reporting consumption during the reference period. Tables 3 and 4 give the reporting proportions separately for different items of cereals and pulses.

4.9.2 It will be useful to recollect the accounting procedure followed in schedule 1.0 for “cooked meals” purchased or obtained free for consumption by a household, in interpreting some of the “reporting households per 1000” figures. Thus the all-India differences between percentages of rural and urban households reporting consumption of cereals, vegetables and spices (99% for rural, 95% for urban), pulses (97% for rural, 94% for urban), and edible oil (98% for rural, 95% for urban) probably reflect the greater proportion of households living on cooked meals obtained from outside in urban areas compared to rural.

4.9.3 It may also be mentioned here that the reporting percentages for food and fuel items have a different interpretation from the percentages for the remaining items because of the differing ways in which consumption is defined for different kind of items. Thus for India (urban), the figure 980 in column 15, Table 5 against “fuel and light” means that 98% urban households actually used fuel and light in their homes during the last 30 days prior to the date of survey and 2% did not. On the other hand, the figure for items of clothing, footwear, education, medical (institutional) and durable goods mean that the household incurred some expenditure during the reference period of 365 days.

4.9.4 Bearing these points in mind, it may be observed from Table 4 (all-India) that the most significant differences between rural and urban sectors in reporting proportion of households occur in case of “fruit”, both “fresh” and “dry”, and “milk and milk products”, “tobacco” and “education”. For “milk and milk products” the urban percentage is 87% and the rural, 71%. For “fresh fruits”, the urban percentage exceeds the rural by 17 percentage points.

4.10 Trends in all-India average consumption expenditure, and in consumption pattern at all-India level, over the last two decades:

4.10.1 The composition of household MPCE at the all-India level is shown for the quinquennial consumer expenditure surveys of NSS (27th, 32nd, 38th, 43rd, 50th and 55th rounds) in Statements 9R and 9U. Apart from absolute values of average MPCE, the bottom of the table presents indices of average MPCE using the 27th round figures as base (=100). The corresponding consumer price indices (CPI for agricultural workers for rural areas and CPI for non-manual employees for urban areas), again with 1972-73 as the base are shown in the last row of the table. Statements 10R and 10U give the percentage composition of household MPCE corresponding to the figures given in Statements 9R and 9U. The following are among the noticeable features of the data:

- (a) The rural MPCE at all-India level has risen from Rs 44 in the 27th round to Rs 486 in the 55th round. The corresponding estimates for per capita expenditure on food has increased from Rs 32 to Rs 289 and for per capita expenditure on non-food has increased from Rs 12 to Rs 197.
- (b) The urban MPCE at all-India level has risen from Rs 63 in the 27th round to Rs 855 in the 55th round. The corresponding estimates for per capita expenditure on food has increased from Rs 41 to Rs 411 and for per capita expenditure on non-food has increased from Rs 22 to Rs 444.
- (c) The share of cereals in household consumer expenditure has fallen steadily in both rural and urban areas. In rural areas it has fallen from 41% to 22% and in urban areas from 23% to 12%.
- (d) In the rural sector, the share of food as a whole has also substantially reduced since the 27th round (1972-73). The shares of some food groups, notably "milk & milk products", "vegetables", and "beverages, refreshments & processed food", have increased in this sector at the expense of the share of cereals.
- (e) In the urban sector, the share of food has continued to fall throughout the period 1972-1994, the overall decline being of the order of 9 percentage points. In this sector the shares of the non-cereal food groups have not changed much. A fall in the share of "sugar" from its 27th round value, is the only noticeable change.
- (d) Among non-food groups, the category "miscellaneous goods and services" registered a steady rise in share over the period under consideration. In the rural sector, the share of this category has increased from 36% to 52%.
- (e) Both in rural and urban areas, the overall rise in MPCE over this period was a little higher than the rise in consumer prices between 1972-73 and 1993-94.
