Overview

ABSTRACT

The 42nd round was devoted mainly to an enquiry on 'Social consumption. The object was to make an assessment of the benefits derived by various sections of the society from public expenditure incurred by the Government. As the largest share of expenditure on social services goes to the area of education and health care, this enquiry was devoted mainly to the collection of informations and extent of their utilisation. This survey was conducted during July 1986-June 1987.

In the absence of an electronic copy of 'manual of instructions to the field staff', more details could not be furnished.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Randomly selected household and its members

Scope

NOTES

The required particulars regarding the educational services received by the households were collected in Schedule 25.2, from each sample household selected for this enquiry. In this schedule some general particulars such as age, sex, educational level attained, current enrolment status were collected for all household members. For those who were currently enrolled in primary or higher levels, detailed information regarding course and level of study, benefits received and expenditure incurred was ascertained in separate blocks of the schedule. In the case of members of age 5 years or more and not currently studying in any educational institutions but had once attended school, particulars about last course attended including whether they completed the course or not and reason for discontinuance was asked even those who had completed the last course. Lastly, the reason for non-enrolment was collected from those who had never been enrolled in an educational institution.

The information collected in this survey was related not only to those persons consuming educational services, but also to those who were not able to do so for various reasons. While the former will serve to verify some of the educational statistics compiled through official channels, the latter should help in formulating corrective measures for further improving the dissemination of education.

The information on the educational attainment of each household member was collected in block 5 of schedule 25.2. Data adopting the same concepts were collected in other blocks also. Education categories were first divided into general and technical streams. General education categories are divided into - general course Arts/Humanities, Science, commerce, home science, oriental studies etc. General course stands for an integrated course of many disciplines such as those followed

in schools. Technical education categories are divided into - Agriculture forestry Engineering Architecture Medicine Public health etc. The levels or stages of instructions considered form a combined list for both streams and were given increasing order of the level of education.

In the absence of an electronic/hard copy of the manual of instructions to the field staff more details could not be provided

Sampling

Sampling Procedure

Basic sample design was stratified two stage with census villages and urban blocks as the first stage unit in rural and urban sectors respectively and house holds as the second stage units in both sectors. While the villages were selected with probability proportional to population with replacement, the sample blocks were selected by simple random sampling without replacement (both in the form of two independent sub samples). The households listed in the sample villages or block divided in to two sub-strata; sub-stratum-1 consisting of households with one or more members enrolled at post-primary level, and sub-stratum- 2 of all the remaining households. These sample households were selected circular systematically with the the random start from each sub-stratum (six households in all)

In the absence of an electronic/hard copy of the 'Sampling design and estimation procedure' details could not be provided

Deviations from Sample Design

There was no deviation from the original sample deviation.

Weighting

Sample weights were calculated and included in each of the data files

Variable 'Wgt_SS' refers to Multiplier for each Subsample.

Variable 'Wgt_Combined' refers to Combined Multiplier.

Questionnaires

Overview

The schedule consists of 9 blocks as follows:-

Block-1: Identification of sample household

Block-2: Particulars of field work.

Block-3.: Household characteristics.

Block 4.1: Remarks by Investigator.

Block-4.2: Remarks by Supervisory officer.

Block-5: Demographic particulars

Block-6: Particulars of education for students currently enrolled at primary and higher levels.

Block-7: Particulars of private expenditure on education for students currently enrolled at primary and higher levels

Block-8: Particulars of education and activity status of persons aged 5 years and above currently not enrolled in educational institution.

A copy of the schedule is attached as external resource.
